Harmony for Hope, Inc. — Organizational Business Plan

A West Virginia 501(c)3 Nonprofit | Mount Hope, Fayette County, West Virginia

April 2026 | Prepared by Carrie Ann Kidd, Founder

Executive Summary

Harmony for Hope, Inc. (H4H) is a West Virginia 501(c)3 nonprofit corporation headquartered at 704 Main Street, Mount Hope, Fayette County, West Virginia 25880. H4H exists to build the infrastructure — physical, digital, cultural, and human — that allows Appalachian communities to govern their own futures, recognize the labor that holds them together, and keep the value they generate within the region that produced it.

H4H is not a single program. It is an organizational umbrella governing five interdependent program arms, each addressing a distinct dimension of community need while sharing a unified governance structure, a common values framework, and a coordinated funding strategy. The five program arms are:

1. **MountainShares** — A closed-loop community economy and mutual credit system
2. **The Commons** — The daily-life platform, gamification layer, and community governance interface
3. **The Mount Hope Historic Walking Trail** — Heritage discovery and place-based economic activation
4. **The Fayette County Community Arts Center (FCCAC)** — Historic NPS structure restoration and resident artist program
5. **Oakvale Area Outreach** — Children's programming and community support for the Oakvale region

Together, these five arms constitute a coherent model of Appalachian community self-determination: a local economy that rewards invisible labor, a platform that makes that economy accessible in daily life, a physical trail that connects heritage to present-day economic activity, a historic cultural anchor building with an active resident artist program currently operating despite deteriorating conditions and targeted for restoration, and an outreach program that reaches the region's youngest residents and their families.

H4H's technology infrastructure — the Ms. Jarvis ALLIS system — is owned and operated by Kidd's Technical Services (KTS) under a non-exclusive, royalty-free community-benefit license to H4H. This arrangement ensures that the technology remains community-accessible while the intellectual property is properly held and maintained by a commercial entity with the capacity to support and develop it.

Founder's Investment: Carrie Ann Kidd has contributed 5,308 hours of senior technical labor valued at $796,200, documented in FA-001 (Founder's Technical Investment Statement), establishing non-dilutable governance standing and serving as documented in-kind match for federal and foundation grants.

Current Seed Ask: $30,000 for Phase 0–1 operations, covering FCCAC proof-of-concept deployment, ALLIS node hardware, app development, Community Champion onboarding, and legal/BSA compliance review.

The Problem H4H Exists to Solve

Appalachian communities face five interlocking structural challenges that no single program can address in isolation.

1. Invisible Labor, No Economic Recognition. Caregiving, mutual aid, heritage preservation, and civic contribution hold Appalachian communities together. These acts generate no recognized economic value, no credit, and no pathway to governance standing. The people doing the most essential community work have the least economic and political voice.

2. Extractive Platforms. Every major platform Appalachian residents currently use — Facebook Marketplace, Amazon, Venmo — extracts behavioral data, attention, and transaction fees without reinvesting in the community. There is no community-governed alternative designed for a specific place and accountable to the people who use it.

3. The Public Benefits Trap. Many West Virginia residents rely on SSI, SNAP, Medicaid, and other means-tested assistance. Participation in digital economies — earning rewards, holding balances — can inadvertently count toward income or asset limits, threatening essential benefits. This iron cage systematically excludes the most vulnerable residents from the digital economy.

4. Cultural Infrastructure in Decay. Historic structures like the Fayette County Community Arts Center — an NPS-affiliated building with documented heritage value — are deteriorating for lack of investment and organizational capacity. The artists who could activate these spaces have no institutional home.

5. Geographic and Generational Disconnection. Rural communities like the Oakvale area face connectivity deserts, limited youth programming, and shrinking institutional presence. Children and families have limited access to the cultural, educational, and civic programming that builds long-term community resilience.

H4H's five program arms address these five challenges directly — not as separate charitable programs, but as an integrated community infrastructure system.

Organizational Structure and Governance

Legal Structure

Harmony for Hope, Inc. is a West Virginia 501(c)3 nonprofit corporation based in Mount Hope, Fayette County, West Virginia. The organization is governed by a dual-layered nonprofit-DAO hybrid structure:

- **Nonprofit Umbrella (H4H):** Legal and regulatory safety envelope, managing bank relationships, contracts, grant administration, and compliance for all five program arms.
- **MountainShares DAO:** Participatory governance layer where community members earn voting rights through documented contribution — one-UEI-one-vote. Governance standing is earned through labor, not purchased with financial stake.

Asset and Technology Ownership

The underlying ALLIS platform, mesh nodes, and Ms. Jarvis system are owned by Kidd's Technical Services (KTS) and licensed to H4H on a non-exclusive, royalty-free community-benefit basis under the Master Services Agreement (executed July 6, 2025). H4H does not own the technology — H4H operates it in service of the community. This structure protects the community's access while ensuring the technology is properly maintained and developed by an entity with the technical capacity to do so.

Founder's Standing

Carrie Ann Kidd (Mamma Kidd) holds non-dilutable governance standing as the founding architect of H4H and all five program arms. Her 5,308 hours of senior technical labor, valued at $796,200 and documented in FA-001, establishes veto power over any proposal that would dilute the organization's commons principles or transfer community-owned value to external actors.

Board of Directors

The H4H Board of Directors provides fiduciary oversight and regulatory compliance for all five program arms. The board composition reflects H4H's multi-program mandate, with representation spanning technology, geospatial systems, community media, and community governance.

Program Arm 1: MountainShares

What It Is

MountainShares (MS) is H4H's closed-loop community economy — a mutual credit system that makes invisible Appalachian labor visible and economically recognizable. MountainShares (M$) is not a speculative cryptocurrency. It is a community-governed medium of exchange designed specifically for the Appalachian context: benefits-safe, locally anchored, and incapable of being extracted by distant financial interests.

How It Works

Residents earn M$ through documented acts of community contribution — caregiving check-ins, mutual aid fulfillment, heritage documentation, civic participation, and quest completion. M$ is spent at participating MountainShares merchants: local businesses, service providers, and community institutions that have agreed to accept community currency in exchange for goods and services. Every M$ earned and spent stays within the community. None flows to distant corporations or cloud platforms.

Benefits-Sensitive Architecture

Every MountainShares account is evaluated at onboarding for Benefits Sensitivity. Benefits-Sensitive Account (BSA) holders — those on SSI, SNAP, Medicaid, or other means-tested assistance — receive hard balance caps, earning throttles, and fail-safe protections that prevent participation from inadvertently triggering benefit loss. This architecture is H4H's most specialized technical achievement. No other platform has designed these protections for Appalachian benefit recipients.

Phase Model

- **Phase 0 (2026):** 25–100 invite-only participants, 5–15 merchants, anchored at FCCAC and 704 Main Street
- **Phase 1 (2027):** 500–2,000 active participants, 30–75 merchants, full Fayette County rollout
- **Phase 2 (2028):** 15,000–40,000 participants, 300–800 merchants, New River Gorge corridor and southern WV
- **Phase 3 (2029+):** 200,000–400,000 participants, up to 8,000 merchants, statewide and diaspora

Revenue Contribution to H4H

Once Phase 1 commerce is live, MountainShares generates transaction revenue:

- Load Fee: 2.85% (USD to M$)
- Merchant Fee: 1.80% on eligible M$ transactions
- Internal Transfer Fee: $0.25

Revenue allocation: 30% to H4H Operations, 30% to Treasury Reserve, 25% split between Community Programs and Community Projects.

Program Arm 2: The Commons

What It Is

The Commons is the daily-life community platform of the MountainShares ecosystem — the governed shared space where Appalachian residents, local businesses, government agencies, and university partners interact, contribute, and earn recognition for the work that holds communities together. It is not a social media platform. It is community infrastructure.

The Commons sits at the intersection of MountainShares (the economic instrument) and Ms. Jarvis (the analytical intelligence). It is the human interface — the place where both systems become visible and usable in daily life.

Core Capabilities

The Daily Life Game. The Commons assigns M$ rewards to everyday acts of community contribution through a gamified engagement layer. Community members advance through ranks (Newcomer → Bronze → Silver → Gold → Champion → Elder) based exclusively on documented contribution hours, unlocking governance rights and economic standing as they go.

The Hyperlocal Marketplace. The Commons app evolves through three stages: Phase 0 (quest-and-contribution platform), Phase 1 (local commerce — M$ spending at local merchants, business discovery, community events), and Phase 2 (full regional marketplace serving both local residents and the West Virginia diaspora through a USD storefront).

Ground-Truthed Local Data Layer. The Commons is the human interface for the Ms. Jarvis GeoBelief Information Model (GBIM), which holds 5.4 million verified local beliefs and 45GB of PostGIS spatial data specific to West Virginia. Community Champions physically verify food pantries, resource locations, trail conditions, and business data — ensuring the system's intelligence is grounded in real, current, local evidence.

Governed Participation. Governance rights are earned through documented contribution. Participants who log community labor advance through ranks that unlock the ability to propose new rules, vote on governance proposals, and help steward the Commons. The one-UEI-one-vote principle ensures financial stake cannot purchase extra influence.

Physical Anchors

The Commons Phase 0 deployment is anchored at two physical locations: 704 Main Street, Mount Hope (H4H headquarters) and the Fayette County Community Arts Center — where the first internet bubble will demonstrate that community-owned broadband and local data caching can work in a real Appalachian setting.

Program Arm 3: The Mount Hope Historic Walking Trail

What It Is

The Mount Hope Historic Walking Trail is H4H's heritage discovery infrastructure — a physical trail connecting the historic sites of Mount Hope, Fayette County, with QR code markers, verified local history documentation, and direct integration into The Commons platform. The trail is the primary physical entry point where residents encounter The Commons in the places they already use.

Dual Function: Heritage and Economic Activation

The Walking Trail serves two simultaneous purposes. As a heritage documentation project, it preserves and makes accessible the documented history of Mount Hope and the surrounding New River Gorge region — connecting to the broader Appalachian cultural preservation mission that runs through all five H4H program arms. As an economic activation tool, the trail drives foot traffic to local businesses, creates quest opportunities in The Commons Daily Life Game, and anchors seasonal campaigns (Harvest Heritage Week, Spring Trail Mapping Drives) that embed The Commons into the rhythms of Appalachian community life.

Connection to ALLIS and Ms. Jarvis

Trail markers and verified location data are integrated directly into the Ms. Jarvis GBIM — adding to the 5.4 million verified local beliefs that ground the system's spatial intelligence. Community Champions who ground-truth trail conditions, verify marker accuracy, and document site histories earn M$ for that labor, creating a self-sustaining verification ecosystem.

Grant Eligibility

The Walking Trail is eligible for heritage tourism, outdoor recreation, and Appalachian economic development grant funding through the Appalachian Regional Commission (ARC), the National Park Service, WV Division of Natural Resources, and the WV Division of Tourism. The trail's documented connection to NPS-affiliated structures (including the FCCAC) strengthens federal partnership applications.

Program Arm 4: The Fayette County Community Arts Center (FCCAC)

What It Is

The Fayette County Community Arts Center is an NPS-affiliated historic structure in Mount Hope, Fayette County — a building of documented heritage value that is currently in a state of deterioration for lack of sustained organizational investment and activation. H4H is the organizational steward working to restore the FCCAC as a functioning community cultural anchor.

The Resident Artist Program

H4H's resident artist program is already active — working artists are present in the FCCAC now. Restoration is not a precondition for the program; it is an urgent necessity to provide those artists and the community they serve with a safe, functional, and dignified space — making it a living cultural institution rather than a preserved but passive historic structure. Resident artists contribute to the documentation of Appalachian cultural heritage, participate in community programming, and serve as visible anchors for the creative and cultural economy of Fayette County.

Resident artists are currently active in the FCCAC despite the building's deteriorated condition — a testament to the program's community rootedness and the urgent need for restoration investment. The resident artist program directly supports H4H's broader mission: artists who create, teach, and document within the FCCAC are engaged in exactly the kind of invisible community labor that MountainShares is designed to recognize. Their contributions are M$-eligible, their work is documentable in The Commons, and their presence activates the building for the community year-round.

Connection to The Commons and ALLIS

The FCCAC is the Phase 0 proof-of-concept anchor for The Commons technology deployment. The first internet bubble demonstrating community-owned broadband, ALLIS mesh node operation, and local data caching will be deployed at the FCCAC. This positions the building not only as a cultural institution but as technical infrastructure for the broader MountainShares ecosystem.

Restoration and Capital Needs

The FCCAC restoration requires capital investment for building repair, accessibility improvements, and technology infrastructure deployment. H4H is pursuing:

- **NPS Historic Preservation grants** — given the building's NPS affiliation and documented heritage value
- **WV Department of Arts, Culture and History** — for arts programming and facility support
- **National Endowment for the Arts (NEA)** — for resident artist program development
- **Appalachian Regional Commission** — for economic activation and community infrastructure

Grant Matching

The founder's $796,200 documented in-kind investment (FA-001) serves as grant match for capital and program grants associated with the FCCAC restoration.

Program Arm 5: Oakvale Area Outreach

What It Is

Oakvale Area Outreach is H4H's community outreach and children's programming arm serving the Oakvale area and surrounding communities in Fayette and Raleigh County. The Oakvale team maintains active programming for children and families, addressing the youth development, educational enrichment, and community support needs of a rural area with limited institutional presence.

Current Programming

The Oakvale Area Outreach team is currently active with a children's program serving local youth and families. Programming focuses on community enrichment, educational support, and the kind of relationship-driven mutual aid and youth development that holds rural communities together — exactly the category of invisible labor that H4H's broader mission is designed to recognize and support.

Integration with MountainShares and The Commons

Oakvale Area Outreach is a natural onboarding pathway for the MountainShares ecosystem. Families engaged in Oakvale children's programming are precisely the population H4H is designed to serve: residents engaged in caregiving, mutual aid, and community labor who currently receive no economic recognition for that work. As The Commons expands into Phase 1, Oakvale programming participants and their families will be among the first communities offered BSA-protected MountainShares onboarding.

Outreach team members who document children's programming hours, deliver community services, and perform mutual aid are engaging in M$-eligible contribution activity. The Oakvale program provides a real-world deployment environment for The Commons Daily Life Game that extends H4H's reach beyond Fayette County's urban core into the rural communities that most need the system's protections.

Funding for Oakvale Outreach

- **WV Children's Trust Fund** — children's programming and family support
- **USDA Rural Development Community Facilities grants** — rural youth programming infrastructure
- **Appalachian Regional Commission** — rural community resilience programming
- **Private foundations** — Benedum Foundation, WV Community Foundation, Claude Worthington Benedum Foundation
- **MountainShares transaction revenue** (Phase 1+) — internal allocation to Community Programs (15% of fee revenue)

Technology Infrastructure

Ms. Jarvis and the ALLIS System

All five program arms operate on the Ms. Jarvis ALLIS platform, owned by KTS and licensed to H4H. Ms. Jarvis is not a generic AI assistant. It is a place-anchored intelligence system specifically built for the West Virginia Appalachian context, running on locally hosted hardware with post-quantum cryptographic security, 5.4 million verified local beliefs, and 45GB of PostGIS spatial data.

Ms. Jarvis orchestrates over 107 containerized services, maintains a ChromaDB-backed semantic memory, and operates under a six-filter constitutional gateway (Ethical, Spiritual, Safety, Threat Detection, Steganography, Truth Verification) that ensures every AI decision is accountable and auditable.

The `ms.h4h.ALLIS` community node is H4H's designated ALLIS deployment — a front-facing named node in the regional ALLIS cluster, sponsored at no cost through the KTS-H4H Master Services Agreement.

ALLIS Mesh Nodes

Locally hosted ALLIS mesh nodes provide maps, safety data, and AI-assisted support on-site at physical program locations, remaining operational during internet outages and in connectivity deserts like the Oakvale area and the New River Gorge corridor. The mesh infrastructure directly supports the Oakvale Area Outreach program's connectivity needs.

Physical Infrastructure

H4H's primary facility is 704 Main Street, Mount Hope, West Virginia 25880 — a community hub and technical laboratory housing backbone hardware for the ALLIS mesh intelligence nodes, community gathering space, and administrative operations.

Management Team

Carrie Ann Kidd (Mamma Kidd) — Founder and Primary Architect
Senior geospatial systems architect; M.A. in Leadership; 10+ years in PostGIS, microservices, and AI orchestration; PALCO/Medicaid Waiver caregiver experience directly informing BSA architecture; lead architect of the Mount Hope Historic Walking Trail; founder of H4H's regional arts programming; embedded community resident in Oak Hill, Fayette County.

Crystal Colyer — Lead Validator, Community Champion
Boone County resident and boots-on-the-ground validator; managing verification of food pantries and resource locations across multiple counties.

Dr. Anurag Srivastava — Technical Advisor, WVU
Raymond J. Lane Professor and Chair, Lane Department of CSEE, West Virginia University; Senior Scientist, Pacific Northwest National Laboratory; provides technical oversight on infrastructure stress, grid resilience, and AI validation methodology.

Taryn Mosser — GIS Advisor
State of West Virginia GIS Coordinator; guides integration of state-scale spatial data including E-911 address layer and tax parcel data.

Brandon Thompson, Starry Eyes Media — Strategic Communications
Strategic media and narrative support; ensures H4H's programs communicate in an authentic, culturally resonant Appalachian voice.

Harmony for Hope Board of Directors — fiduciary oversight and regulatory compliance for all five program arms.

Unified Funding Strategy

The Five Grant Families

Each H4H program arm aligns with one or more distinct grant funding families, allowing H4H to pursue a diversified, non-competing grant portfolio.

Program Arm	Primary Grant Families	Key Funders
MountainShares / The Commons	Technology, community innovation, digital equity	ARC, USDA Rural Development, Dept. of Energy
Mount Hope Historic Walking Trail	Heritage tourism, outdoor recreation, Appalachian development	NPS, ARC, WV Division of Tourism, WV DNR
Fayette County Community Arts Center	Historic preservation, arts programming, cultural infrastructure	NPS Historic Preservation, NEA, WV DACH
Oakvale Area Outreach	Children's programming, rural youth development, family support	WV Children's Trust Fund, USDA Community Facilities, Benedum Foundation
Infrastructure (cross-program)	Rural broadband, resilient infrastructure, AI for rural communities	USDA ReConnect, Dept. of Energy, NIST

Grant Match

The founder's $796,200 documented in-kind investment (FA-001) serves as non-dilutable grant match across all five program arms. This is a structural funding advantage: H4H enters every federal grant application with a documented match that most comparable nonprofits cannot demonstrate.

Year 1 Seed Request: $30,000

Category	Estimated Cost
ALLIS node hardware — FCCAC proof-of-concept	$12,000
SKLink mesh satellite backhaul	$6,000

Category	Estimated Cost
App development — front-end, red-team ready	$7,000
Community Champion onboarding and ground-truthing	$3,000
Legal / BSA compliance review	$2,000
Total Year 1 Seed Ask	$30,000

Sources: H4H community foundations, small state innovation grants, and individual donors.

Long-Term Hardware Procurement

Full corridor-scale ALLIS cluster hardware carries a cost ceiling of $40,000, targeted for the October 2027 milestone, contingent on ARC, USDA Rural Development, or Department of Energy grant awards.

Self-Sustaining Revenue (Phase 1+)

Beginning with Phase 1 MountainShares commerce launch (Q1–Q2 2027), H4H's transaction fee engine provides recurring operational revenue allocated as follows:

- 30% → H4H Operations
- 30% → Treasury Reserve
- 15% → Community Programs (Oakvale Outreach, FCCAC programming, Trail maintenance)
- 10% → Community Projects (capital improvements, new program development)

Milestones

Milestone	Target
704 Main Street operational as community hub	Completed
Master Services Agreement (KTS-H4H) executed	Completed
Walking Trail Phase 1 markers installed and documented	Completed
Oakvale children's program active	Completed
FCCAC proof-of-concept ALLIS node deployed	Q2–Q3 2026
Commons Phase 0: 25–100 invite-only participants live	Q2–Q3 2026
Pre-launch audit report and founding badges issued	Q4 2026
BSA architecture validated	Q4 2026
First NPS/ARC grant application — FCCAC restoration	Q3 2026
Oakvale Outreach — first WV Children's Trust Fund application	Q3 2026
Commons Phase 1 public launch — Fayette County	Q1–Q2 2027

Milestone	Target
First government/university MOU signed	Q4 2027
FCCAC resident artist program formally launched	Q1 2027
Full corridor-scale ALLIS hardware procurement	Q4 2027
MountainShares Phase 2 — New River Gorge regional expansion	2028

Barriers to Entry

Deep Human Infrastructure. Community Champions, Captains, and Elders are earned through multi-year commitments to documented community labor. This human layer cannot be bought or replicated by an outside actor.

Benefits-Sensitive Architecture. Building BSA protections that actually work for Appalachian benefit recipients requires deep regional policy expertise, legal counsel, and community trust built over years. No technology-first competitor has this.

Proprietary Place-Based Intelligence. Ms. Jarvis's 5.4-million-belief GBIM and 45GB PostGIS database cannot be replicated without years of local data collection and community verification.

Physical Infrastructure. The FCCAC, the Walking Trail, and the Oakvale program presence represent years of boots-on-the-ground relationship building that no outside organization can replicate quickly.

Earned Governance Standing. Governance rights in the MountainShares DAO are earned through documented contribution, creating a deeply-rooted governance layer that prioritizes long-term community members over any external actor with financial resources.
